

Workforce0 Product Guide

Workforce0 — Your AI Workforce

Transform business meetings into deployed software and executed actions. AI agents handle the work — you approve the results.

What is Workforce0?

Every day, your team sits through meetings, takes notes, writes briefs, assigns work, and follows up. It takes hours. Sometimes days. By the time a product requirement is written and handed to engineering, the meeting that sparked it is a distant memory.

Workforce0 changes that equation entirely. You have your meeting, share the transcript, and AI does the rest — generating structured briefs, writing user stories, creating action items, and even building the software. Think of it as hiring a consulting firm that works in seconds instead of weeks and never drops the ball on follow-through.

The result? Your team spends time making decisions, not doing paperwork. Meetings become the starting line for real work, not a bottleneck before it begins.

How It Works

1. **Have your meeting** — Sprint planning, product review, Gemba walk, customer call, any meeting at all.
2. **Share the transcript** — Paste it directly, upload a file (.vtt, .srt, .txt), or connect Google Meet for automatic capture.
3. **AI generates a brief** — Requirements, user stories, action items — structured, organized, and ready for review.
4. **Review and approve** — AI flags what it is unsure about. You approve, edit, or send back for revision.
5. **AI builds it** — Your AI developer writes the code, creates tests, and opens a pull request.
6. **QA validates** — AI reviews the code against the original requirements automatically.
7. **You ship** — Merge the pull request and deploy. Done.

From a 30-minute meeting to a working pull request — same day.

What You Get

For Product Leaders

- Meeting to structured brief in **20 seconds** (not 4 hours)
- 90%+ first-pass approval rate on generated briefs
- AI flags gaps and asks the right questions before work begins
- Download briefs as documents or sync to Jira automatically

For Engineering Leaders

- Pull requests generated directly from approved briefs
- Code follows your team's conventions (AI learns your patterns)
- Quality checks run automatically — no manual review bottleneck
- Works with any git provider (GitHub, GitLab, Bitbucket)

For Operations & Manufacturing

- Gemba walk notes become structured improvement tickets instantly
- Safety incident reports generated from conversations
- Action items with owners, deadlines, and verification methods
- Jira integration for tracking progress across teams

Getting Started

Step 1: Sign Up

Go to your company's Workforce0 portal and create an account. Takes 30 seconds.

Step 2: Paste Your First Transcript

Click "**Paste Transcript**" on the Meetings page. Paste any meeting notes, conversation, or call transcript.

Step 3: Review Your Brief

AI generates a structured brief in roughly 20 seconds. Review it, approve it, or request changes — all from the browser.

Step 4: Connect Your AI Agent (Optional)

For automatic code generation, your IT team installs the Workforce0 agent on a dedicated machine. One-time setup:

```
docker run -d workforce0/agent -e WF0_TOKEN=your_token
```

Your IT team handles this once — you never touch it again.

Pricing

Plan	Monthly	What You Get
Starter	\$49	10 meetings/month, brief generation
Team	\$199	50 meetings/month, unlimited briefs, code generation
Business	\$499	Unlimited meetings, priority support, custom templates
Enterprise	Custom	Dedicated support, SLA, custom integrations

You bring your own AI subscription (Claude, Gemini). Workforce0 orchestrates the workflow — you own the compute.

ROI Calculator

Without Workforce0	With Workforce0
4 hours to write a brief	20 seconds
2-5 days to code a feature	30 minutes
\$200-400 per brief (analyst time)	\$0.008 per brief
2 weeks from meeting to pull request	Same day

Typical monthly savings for a 10-person product team: \$8,000-15,000

Security & Privacy

- Your data never leaves your infrastructure
- The AI agent runs on **your** machine, not ours
- Meeting transcripts are encrypted at rest
- SOC 2 compliance on the roadmap
- We never train on your data — ever

FAQ

Q: Do I need to be technical? No. The product is designed for executives and business leaders. Your dev team sets up the agent once — after that, everything works from the browser.

Q: What AI models do you use? Google Gemini for meeting analysis (fast and cost-effective). Anthropic Claude for code generation (best-in-class quality). You bring your own subscriptions.

Q: Can I use this without the code generation? Absolutely. Many teams use Workforce0 just for meeting-to-brief conversion. The code generation is entirely optional.

Q: What about Zoom and Teams? Download your transcript from Zoom or Teams and upload it as a .vtt or .txt file. Native integrations are coming soon.

Q: How long does setup take? You can be generating briefs within 5 minutes of signing up. The optional AI agent for code generation takes about 30 minutes for your IT team to install.

Workforce0 — Stop doing the work. Start approving the results.
